Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/574,403	Applicant(s) RAINER ET AL.	
	Examiner ANGEL BROCKMAN	Art Unit 2463	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 December 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-8 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-8 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 April 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 1, 2010 has been entered.

Response to Amendment

2. Claims 1-7 were formerly rejected under 35 U.S.C. 103 (a). Pursuant to applicant's amendments these rejections have been withdrawn.

Response to Arguments

3. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2463

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Meyer-Grafe (US 2005/0083954 A1, hereinafter Meyer) in view of Machida et al. (US 6,122,257, hereinafter Machida).

Regarding **claim 1**, Meyer discloses a system for transmitting data in bi-directional bus with at control device comprising a send and receiving unit for data fields combined into a data frame(¶[0045]-¶[0046], ¶[0063], wherein the central unit is the control device) and with bus subscribers which comprise an evaluation circuit for reading in and reading out data fields in data frames(¶[0027], ¶[0059], ¶[0074]; qith at least the bus subscriber at the bus end opposite of the control device comprising a send device for a data frame (figure 1, each subscriber is able to transmit)wherein at least the bus subscriber at the end of the bus comprises a control stage which is activated by a received frame sent by a control device over the serial bi-directional bus and triggers the send device depending on the receipt of a data frame within the terms of the

Art Unit: 2463

transmission of a data frame for at least the data fields of the bus subscribers(¶[0065]);for sending a data frame (11) over the serial bidirectional bus in the direction of the control device (1) (¶[0063]) whereas the sent data frame (11) contains at least data fields (14,15,16) for all bus subscribers (2,3,4) and the data frame is handed over from one bus subscriber to the next bus subscriber (¶[0021]-¶[0023], ¶[0068], figures 3a-3c). Meyer does not disclose wherein each bus subscriber (2,3,4) comprises a test circuit (24) to determine whether it is located at the bus end opposite of the control device. Machida discloses wherein each bus subscriber (2,3,4) comprises a test circuit (24) to determine whether it is located at the bus end opposite of the control device (figure 1, 20 , wherein the terminal address detecting circuit and terminal resistance include the test circui, column 7, lines 25-37) . Thus, it would have been obvious to the one of ordinary skill in the art at the time of invention to utilize the teachings as disclosed by Machida along with the system of Meyer. The test circuit as disclosed by Machida can be implemented in the system of Meyer hardware implementation. The motivation for utilizing the test circuit as disclosed by Machida along with the system of Meyer is to increase the efficiency of the system by detecting errors at each bus subscriber.

Regarding **claim 2**, Meyer discloses wherein each of the bus subscribers comprises a control stage for a send device for sending a data frame for the own data fields and the data fields of the bus subscribers which lie between the control device and the respective bus subscribers (¶[0055],¶[0063]-¶[0065], wherein the check includes the control stage)

Regarding **claim 3**, Meyer discloses the bus subscribers comprise a memory for the position of the data fields within the respective data frame which data fields can be read in and out via the evaluation circuit (¶[0028],¶[0025]).

Art Unit: 2463

Regarding **claim 4**, Meyer discloses the control device comprises an allocation stage for the position of the data fields within a data frame which can be allocated to the individual bus subscribers (column 17, lines 33-45, column 22, lines 33-40) and an initialization device for reading out the positional data in data fields of a data frame addressed to the individual bus subscribers (column 18, lines 55-65, column 19, lines 5-35, where the microprocessor includes the initialization of reading out positional data), and that the bus subscribers comprise an initialization circuit for the address-related reading out of the positional data from the addressed data fields of the data frame into the memory for these positional data (column 19, lines 36-67, where the table includes the positional data., column 17, lines 33-40).

Regarding **claim 5**, Machida discloses each bus subscriber comprises a test circuit for recognizing a bus subscriber connected to the bus and connected in outgoing circuit with the same (figure 1, (2)).

Regarding **claim 6**, Meyer discloses the control device and the bus subscribers each comprise an encoding device for producing check data from the data frame and that, as is known, the control device and the bus subscribers each comprise a check device for check data received with the data frames ([¶0026]-[¶0027], [¶0055]).

Regarding **claim 7**, Meyer discloses the control device comprises an address memory for the addresses of the bus subscribers ([¶0024], [¶0056], wherein the address list is included in memory) and that each bus subscriber comprises a recognition circuit for triggering the evaluation circuit for reading out the data field in the data frame addressed to the bus subscriber on the one hand and for reading in its data field into the data frame on the other hand ([¶0025]-[¶0027]).

Art Unit: 2463

Regarding **claim 8**, Meyer discloses multiple data fields are sent simultaneously in a single data frame at a time (¶[0068]).¶[0057]).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Day et al. (US 5,974,475).

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANGEL BROCKMAN whose telephone number is (571)270-5664. The examiner can normally be reached on Monday-Friday ,7:30-5:00pm.

7. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Derrick Ferris can be reached on 571-272-3123. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

8. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
